Retirement of carbon credits

Rawstone Consulting

has purchased,

23tCO₂e

of verified carbon credits from the following project:

Cleaner and safer cooking

Malawi

Project type: Cookstove

Offset vintage: 2016

This project provides improved cookstoves in Malawi, one of the poorest countries in the world, where 98% of families cook using firewood and charcoal. The cookstoves, made locally by Malawians, provide a more fuel efficient and faster way of cooking than the traditional three stone fires creating more spare time and less deforestation pressure on local resources. However, the biggest benefits of these cookstoves comes from the reduction of smoke, which reduces the exposure to indoor air pollution and the risks of premature death. WHO reports that 50% of premature deaths among children under five worldwide are as a result of air pollution.
