

Certificate

Retirement of carbon credits

Rawstone Consulting

has purchased,

2tCO₂e

of verified carbon credits from the following project:

Clean water project

Mozambique

Project type: Water borehole

Offset vintage: 2020

The project activity is the installation and reparation of water boreholes throughout the Manica province in western Mozambique. The boreholes provide access to clean drinking water and avoids the need for boiling water in order to sterilise it for drinking. The project saves time and reduces the spread of water born diseases and generates carbon credits through the reduction in fuel sources for boiling water under the baseline scenario. The project activity replaces anthropogenic emissions of greenhouse gases estimated to be approximately 10,000tCO₂e per year, providing access of clean drinking water for for 3125 people.
